

## **Model Building - MS/HS 5<sup>th</sup> period-Spring Only**

**Instructor:** Dr. Harold Mohler

The goals for this class are fairly simple and hopefully straight forward. The student will learn to read and follow directions and assemble several small wooden models. They should learn to sand and paint wooden models, and learn to use safely small tools like Xacto knives, small saws, screw driver, and drive nails carefully. Since we have no access to larger power tools the goals are limited.

Since this is a new class and a new experience for me, I welcome any and all suggestions.

If all goes well we may try some larger projects such as bird houses or design and build a model bridge.

J. Harold Mohler
